

## Company Profile

Aquaworx AG, headquartered in Arbon (Switzerland), is a company of PlasmaSelect AG (Munich). It is making a significant contribution to sustainable resources management by developing and manufacturing technologies for the disinfection and filtration of water and fluids at its Marina Horn site on Lake Constance (Switzerland). Patents are pending for these technologies. The platform technology works by ingeniously combining UV radiation and ultrasound in one system, so that germs are eliminated effectively and prevented from breeding. The Aquaworx product group combines persistently good performance with an economy that is unprecedented in the industry. The primary possible applications in the water and filtration sector include the purification of drinking water and waste water treatment, the filtration of fluids, the purification of ballast water in the nautical industry, the purification of pool, drinking and non-drinking water in holiday home, as well as the prevention of the formation of legionella bacteria in homes for the elderly, hospitals and hotel facilities. International sales are handled by Aquaworx Deutschland GmbH headquartered in Munich. You will find further information at [www.aquaworx.de](http://www.aquaworx.de).
